

Expense Tracker

A simple command-line expense tracker built in Python. Add, view, delete, and summarize your expenses — all saved locally in a JSON file.

Features

- Add new expenses with title, amount, category, and date
- View all recorded expenses in a table
- Delete an expense by ID
- View total spending grouped by category
- Data persists between runs in `expenses.json`

Requirements

- Python 3.6+

No external libraries needed — uses only the standard library.

How to Run

```
python expense_tracker.py
```

Usage

On running the script, you'll see a menu:

```
===== Expense Tracker =====  
1. Add Expense  
2. View Expenses  
3. Delete Expense  
4. View Totals by Category  
5. Exit
```

Enter the number corresponding to the action you want to perform and follow the prompts.

Data Storage

All expenses are stored in `expenses.json`, created automatically in the same directory as the script the first time you add an expense.

Project Structure

```
expense-tracker/  
├── expense_tracker.py  
├── expenses.json      # created  
                        automatically  
└── README.md
```

Future Improvements

- Filter expenses by date range
- Export summary to CSV
- Add a budget limit with alerts
